- 2 ● Sās-wādān
- 1 ● Mithyātva

50:50

A: May be

B: May be not

C: No

D: Yes

## Vegetarianism & Ecology

- In large measure, the escalating loss of species, destruction of ancient rain forests to create pasturelands for livestock, loss of topsoil and the consequent increase of water impurities and air pollution have all been traced to the single fact of non-vegetarian food (meat, chicken, and dairy products) in the human diet.
- No single decision that we can make as individuals or as a race can have such a dramatic effect on the improvement of our planetary ecology as the decision to not eat non-vegetarian food.
- Many seeking to save the planet for future generations have made this decision for this reason and this reason alone.

## Vegetarianism & Ecology (Cont'd)

- The choice of a vegetarian (absolutely no animal products) diet is an expression of a sincere consideration for the ecology of the planet as well.
- In addition, there are billions of starving people who can be fed if only the raising of livestock was stopped.

## Slaughtering of Animals in USA

- • Cattle - 130,000 slaughtered per day
- • Calves - 7,000 slaughtered per day
- • Hogs - 360,000 slaughtered per day
- Chickens - 24,000,000 slaughtered per day

## **Cruelty to Cows by Dairy Industries**

- Cows are kept pregnant continually
- Slaughtering their 70% to 80% of baby calves within six months by Veal industry or within five years by beef industry
- Slaughtering the mother cows after five years of their fertile life (life expectancy is 15 years)
- Everyday hormones or drugs are injected to increase milk yield.

## **Water Consumption**

- Slaughtering animals requires hundreds of millions of gallons of water every day. The waste in these places, estimated at about two billion tons a year, mostly ends up in waterways, polluting and killing thousands of fish, and creating a human health problem.
- Livestock (Cattle, Calves, Hogs, Pigs) production accounts for more than half of all the water consumed in USA.

## Land Usage

- A third of the surface of North America is devoted to grazing
- Half of American croplands grow livestock feed for meat and dairy products
- 2% of US cropland produces fruits and vegetables, while 64% of US cropland is for producing livestock feed
- One acre of prime land can make 5,000 lb. of Cherries, 10,000 lb. of Green beans, 30,000 lb. of Carrots, 40,000 lb. of Potatoes, 50,000 lb. of Tomatoes, or 250 lb. of Beef

## **Land Usage (Cont'd)**

- 220 million acres of land in the USA have been deforested for livestock production
- 85% of annual US topsoil loss is directly associated with raising livestock
- 25 million acres in Brazil, and half the forests in Central America

## Cost Comparison

- The cost of raw materials consumed to produce food from livestock is greater than the value of all oil, gas and coal consumed in America.
- Growing grains, vegetables and fruits uses less than 5% as much raw materials as does meat and dairy production
- 2 calories of fossil fuel used for 1 calorie of protein of soybeans, while 78 calories of fossil fuel used for 1 calorie of beef
- 6.9 kg of grain and soy to make 1 kg of boneless trimmed pork

How many *Gati* (Destinies – State of Existence)?

- 15 ● Moksha
- 14 ● A.Kevali
- 13 ● S.Kevali
- 12 ● K.Moha
- 11 ● U.Moha
- 10 ● S.Samprāya
- 9 ● A.Bādar
